ICCT COLLEGES · SYSTEM PRESENTATION

IT Help Desk & Ticketing System

System Guide: the landing page and what each role can do

A web-based help desk where the ICCT community reports IT problems as **tickets**, and the IT Department assigns, fixes, and tracks them until they are resolved.

Who uses the system: 5 account types

Group	Role	What they do
Requesters (report problems)	Student · Faculty & Staff · Computer Lab	Submit tickets and follow them until fixed
IT Department (solves problems)	IT Technician	Works on the tickets assigned to them
IT Department (manages the system)	IT Admin	Assigns tickets, manages accounts, views reports

How a ticket flows

Requester submits → *Open*

→ **Admin** assigns → *Assigned*

→ **Technician** works on it → *In Progress → Resolved*

→ **Requester** confirms & rates → *Closed*

Presentation parts

Each part starts on its own page, so every presenter can take their pages.

Part	Topic	Presenter
1	Landing Page	
2	AI Assistant & Logging In	
3	Student	
4	Faculty & Staff	
5	Computer Laboratory	
6	IT Technician	
7	IT Admin	
8	Ticket Statuses & Shared Features	
9	Live Demo Flow	

PART 1

Landing Page

The home page anyone sees, even without an account Presenter: _____

The first page of the system. It introduces the help desk and leads people to **log in** or **register**.

Navigation bar

- ICCT logo and links to **Features**, **How It Works**, **Services**, and **FAQ**
- **Log in** and **Register** buttons (a logged-in user sees **Go to Dashboard** instead)

Hero section

- Headline: “Tech problems? We've got you covered.”
- Students, faculty, and staff can report technical issues, track requests in real time, and get them resolved faster
- Buttons: **Submit a Ticket** and **Track My Ticket**
- Quick facts: 24/7 availability · average response under 1 hour · all campuses
- A sample **Recent Tickets** card showing what tickets and statuses look like

Features: the four main benefits

Feature	What it means
Easy Ticket Submission	Report an issue in seconds with a guided form
Real-Time Tracking	See every status change: Open, In Progress, Resolved
Priority & Assignment	Tickets are prioritized and sent to the right technician
Secure Accounts	Encrypted passwords and secure sessions

How It Works: 4 steps

1. **Create an account** using the ICCT ID number and email
2. **Submit a ticket**: describe the issue, choose a category, set its urgency
3. **Get assigned**: an IT technician picks it up and gives updates
4. **Issue resolved**: confirm the fix and rate the support

Other sections

- **ICCT AI Assistant**: a floating chat button in the corner (explained in Part 2)
- **Support Areas (Services)**: the four portals: Student Support, Computer Laboratory Support, Faculty & Staff Support, IT Admin Dashboard
- **FAQ**: who can use the help desk, response time, tracking a request, forgotten password
- **Footer**: quick links and IT Department contact (Mon–Sat, 8:00 AM – 5:00 PM, helpdesk@icct.edu.ph)

Presenter note: the “Recent Tickets” card and the “128 tickets resolved this week” number on the landing page are **sample display content**, not live data. Live numbers are on the Admin Dashboard and in Reports.

PART 2

AI Assistant & Logging In

The chatbot, and how each account type signs in

Presenter: _____

ICCT AI Assistant (chatbot)

The floating sparkle button in the corner, available on the landing page, login and register pages, and every page after login.

- Answers common IT problems (Wi-Fi, passwords, printers, projectors, school email) with step-by-step fixes
- Replies in **English or Taglish**, depending on how the user writes
- Bases its answers on the system's **Knowledge Base** (official ICCT procedures)
- If the steps don't fix it, it tells the user to submit a ticket
- Never asks for passwords or OTP codes

Logging in

Every account logs in with its **email or ID number** and **password**. Students and faculty also confirm with a code sent to their email.

	Student	Faculty & Staff	Computer Lab	IT Technician	IT Admin
How the account is made	**Registers on their own**	Created by Admin	Created by Admin	Created by Admin	Created by Admin
Email OTP code at login	**Yes**	**Yes**	No	No	No

Security features

- **OTP (One-Time Password):** after the correct password, students and faculty receive a **6-digit code by email**
  - The code expires in **5 minutes**
  - 5 wrong tries are allowed before the login must restart
  - A new code can be requested every 60 seconds
- **Forgot password:** every account can reset its password with a code sent to its email
- **Login lockout:** after 5 wrong passwords, login is blocked for 5 minutes
- **Password rule:** at least 8 characters with uppercase, lowercase, and a number
- **Inactive accounts:** the Admin can deactivate an account, which immediately blocks it from logging in
- **Passwords are encrypted** (hashed) in the database and are never stored as plain text

PART 3

Student

Portal: Student Support

Presenter: _____

Account	Students create their own account on the **Register** page: ID number, name, email, course, password, and agreement to the terms
Login	Email or ID number + password + **email OTP code**
Sees	Only their own tickets

Dashboard

- Greeting with a **Submit a Ticket** button
- **Virtual IT Office**: a live, animated office map where the IT team appears as robots (Working, Available, Away), and the user can follow where their ticket is
- Ticket counters: **Open**, **In Progress**, **Resolved**, **Total**
- **"What do you need help with?"**: shortcut cards for each ticket category
- **"Please confirm these fixes"**: tickets IT marked as resolved, waiting for confirmation
- **Recent Tickets** list

Ticket categories

Category	Example
Student Portal Problem	Can't open grades, enrollment, or schedules
Login / Account Issue	Forgot password, locked account, login errors
Technical Assistance	Help with own device, campus Wi-Fi, school software

What a student can do

- **Submit a ticket**: category, subject, description, location (optional), and priority (Low, Medium, High, Urgent)
- **Attach up to 3 images** (screenshots or photos, 5 MB each)
- See **only their own tickets** and follow every status change
- **Comment** on their ticket to add details or ask for updates
- Receive **notifications** (bell icon) when the ticket is assigned, updated, or resolved, and an **email** when it is resolved
- When a ticket is resolved: **Confirm & Close** it with a **1–5 star rating** and feedback, or **Reopen** it if the problem is still there
- Update contact details and change password in **My Profile**

PART 4

Faculty & Staff

Portal: Faculty & Staff Support Presenter: _____

Account	Created by the **IT Admin** (faculty cannot self-register)
Login	Email or ID number + password + **email OTP code** (same as students)
Sees	Only their own tickets

Faculty use the **same dashboard and ticket features as students**: Submit a Ticket, the Virtual IT Office, ticket counters, **image attachments (up to 3)**, comments, notifications, and confirm / rate / reopen.

Dashboard

- Greeting with a **Submit a Ticket** button
- **Virtual IT Office**: a live, animated office map where the IT team appears as robots (Working, Available, Away), and the user can follow where their ticket is
- Ticket counters: **Open**, **In Progress**, **Resolved**, **Total**
- **"What do you need help with?"**: shortcut cards for each ticket category
- **"Please confirm these fixes"**: tickets IT marked as resolved, waiting for confirmation
- **Recent Tickets** list

What's different from a student

- The account is **verified by the IT Admin** instead of being self-registered
- Problems are about **teaching and school systems**, not a personal student account
- The location field asks for **Room / Office**, and the profile shows **Department / Office** instead of Course

Ticket categories

Category	Example
Online Class Problem	LMS, video calls, online class tools
School Systems Issue	Grading, attendance, other school systems
Email / Account Request	New school email, password reset, system access
Equipment Request	Projector, laptop, speakers

What faculty can do

- Submit tickets with category, subject, description, room/office, priority, and **up to 3 images**
- Follow, comment on, and get notified about their tickets
- **Confirm & Close** with a rating, or **Reopen** a ticket that isn't fixed
- Update contact details and change password in **My Profile**

PART 5

Computer Laboratory

Portal: Computer Laboratory Support Presenter: _____

Account	Created by the **IT Admin**. It belongs to a **laboratory room** (e.g. "Computer Laboratory 1"), not to one person, and is used by the lab in-charge
Login	Email or ID number + password (**no OTP**)
Sees	Only the lab's own tickets

Lab accounts use the same requester dashboard: Submit a Ticket, the Virtual IT Office, ticket counters, comments, notifications, and confirm / rate / reopen.

What's different

- **Location is required** on every ticket and is pre-filled with the lab's name, so the user only adds the PC number (e.g. "Lab 1, PC-12"). The technician knows exactly where to go.
- **No OTP** at login, only the password
- No image attachment (that feature is for students and faculty)

Ticket categories

Category	Example
Broken / Defective Computer	Unit won't boot, damaged hardware, missing peripherals
Internet / Network Problem	No connection or slow internet in the lab
Printer Problem	Paper jams, no printout, low toner/ink
Software Installation Request	Install or update software needed for classes

What a lab account can do

- Report broken computers, internet and printer problems, and request software installation
- Follow, comment on, and get notified about the lab's tickets
- **Confirm & Close** with a rating, or **Reopen** a ticket that isn't fixed

PART 6

IT Technician

Portal: IT Technician Workspace

Presenter: _____

Account	Created by the **IT Admin**. Technicians **fix** problems; they do not submit tickets
Login	Email or ID number + password (**no OTP**)
Sees	Only the tickets **assigned to them**
Sidebar	Dashboard · My Assigned Tickets (with a badge of active tickets) · Knowledge Base · My Profile

Dashboard

- Greeting that says how many active tickets are in their queue
- Counters: **New Assignments**, **In Progress**, **On Hold**, **Resolved This Month**, and their **Average Rating** from requesters
- **My Queue**: active tickets, **most urgent first**
- **Recently Resolved** tickets

What a technician can do (only on tickets assigned to them)

- See the full ticket details, including the requester's email and any attached images
- Change the status to **In Progress**, **On Hold** (e.g. waiting for parts), or **Resolved**
  - Marking a ticket **Resolved** requires a note explaining the fix, and the requester is **emailed automatically**
- Change the ticket's **priority**
- Post **comments** to the requester, or **internal notes** that only IT staff can see
- Add and edit **Knowledge Base** articles that the AI Assistant uses

What a technician cannot do

- See tickets that are not assigned to them
- Assign or reassign tickets (only the Admin can)
- Close tickets, or reopen a closed ticket

PART 7

IT Admin

Portal: IT Admin Dashboard

Presenter: _____

Account	The main system account. The Admin **runs the whole system**
Login	Email or ID number + password (**no OTP**)
Sees	**All tickets** from every portal
Sidebar	Dashboard · All Tickets · Unassigned (with a badge) · Accounts · Reports · Knowledge Base · My Profile

Dashboard

- Alerts: how many tickets **need a technician** and how many **urgent** tickets are still open
- Quick buttons: **Assign Tickets**, **Create Account**, **Reports**
- Counters: **Total Tickets**, **Unassigned**, **Unresolved**, **Completed**, **Avg. Resolution Time**
- Charts: **new tickets per day** (last 30 days), **tickets by support area**, **tickets by status**
- **Unassigned Tickets** list
- **IT Personnel Workload**: each technician's active tickets, resolved tickets, and average rating

Ticket management

- Sees **all tickets**, with filters for status, priority, category, support area, and search
- **Assigns or reassigns** a ticket to a technician. The list shows each technician's active tickets, so work is shared fairly
- Can set **any status**, including **Closed**, and is the **only one who can reopen** a closed ticket
- Can change priority, comment, and post internal notes on any ticket

Accounts (user management)

- **Create accounts** for Faculty & Staff, Computer Lab, IT Technician, and other Admins (a password can be auto-generated)
- **Edit** account details and role
- **Reset a password** (gives a temporary password to share privately)
- **Activate / Deactivate** an account
- Filter accounts by role, and search by name, email, ID number, or department

Reports: IT Problems Report

- Date range: Last 7 days, This month, Last month, This year, or a custom range
- Summary: Tickets Submitted, Completed (with resolution rate), Unresolved, Unassigned, Avg. Resolution Time, **Satisfaction** (average rating)
- Breakdowns: new tickets over time, by support area, by priority, **problems by category**, **IT personnel performance**, and **locations with the most problems**
- **Export CSV** (opens in Excel) and **Print**

Knowledge Base

- Add, edit, and hide help articles in **English and Tagalog**, with keywords
- The **AI Assistant answers from these articles**, so IT controls the advice it gives

PART 8

Ticket Statuses & Shared Features

The life of a ticket, and what every account has

Presenter: _____

Ticket statuses

Status	Meaning	Who sets it
Open	Just submitted, no technician yet	System (on submit)
Assigned	A technician has been assigned	Admin
In Progress	The technician is working on it	Technician / Admin
On Hold	Paused, e.g. waiting for parts or information	Technician / Admin
Resolved	Fixed; waiting for the requester to confirm	Technician / Admin
Closed	Confirmed by the requester (with rating), or closed by Admin	Requester / Admin

Priorities

Priority	Meaning
Low	Minor, can wait
Medium	Affects my work
High	Can't work or class affected
Urgent	Many people affected

Every change is recorded in the ticket's **Activity** timeline: who did what, and when.

Features every account has

- **Notifications**: bell icon with an unread count; clicking one opens the related ticket
- **My Profile**: update contact details and change password
- **AI Assistant**: available on every page
- **Mobile-friendly**: works on phones, tablets, and computers

PART 9

Live Demo Flow

A suggested order for showing the system

Presenter: _____

Before the presentation: log in as Admin and create at least one **IT Technician** account in **Accounts**, so there is someone to assign tickets to. Register the demo student with a **real email inbox** so the OTP arrives.

Step	Who	What to show
1	Visitor	**Landing Page**, then open the **AI Assistant** and ask: “walang internet sa lab”
2	Student	**Register** a new account → log in → enter the **OTP** from email
3	Student	**Submit a ticket** with a screenshot attached
4	Admin	See the new ticket under **Unassigned** → **assign** it to the technician
5	Technician	Set it to **In Progress** → add an internal note → mark it **Resolved** with a note
6	Student	See the notification → **Confirm & Close** with a 5-star rating
7	Admin	Show the **Dashboard** charts, **Reports**, and **Export CSV**
8	Admin	**Create** a Faculty or Lab account in **Accounts**
